

INSECTICIDE

SPEEDY-PY

Rev. 1 of 13/12/2019

**READY-FOR-USE LIQUID INSECTICIDE WITH FAST KILLING ACTION
- PROFESSIONAL AND DOMESTIC USE -****COMPOSITION**

Chrysanthemum cinerariaefolium, Pyrethrum extract at 50% gr. 0.25
Co-formulants and water quantum satis for gr. 100

CHARACTERISTICS

SPEEDY-PY is a ready-for-use liquid insecticide supplied with a fast killing action to control flying and crawling insects. **SPEEDY-PY** is a formulated product in water microemulsion, without employing solvents and odourless. It is designed for the protection of the environment, is gas-less and does not stain. The presence of natural Pyrethrum avoids phenomena of resistance and addiction. It can be used on turfs, hedges, bushes, and tree-lined avenues to control mosquitoes.

FIELDS OF USE.

Pyrethrum properties allow to use **SPEEDY-PY** for non-residual treatments outdoor and indoor, in particular where an immediate effect is required and a high action persistence is not wished, such as community places (urban areas, offices, canteens, hotels, restaurants, theatres, kitchens, campings, holiday villages, public buildings including hospitals, schools, clinics, and barracks), housing areas (flats, houses, kitchens, roofs, garages, avenues, gardens, green areas in general), production areas (food industry plants (without direct contact with food), dairies, milk-houses, seasoning warehouses, pork salted meats storing, mills, cereal warehouses, slaughterhouses, tobacco mills, and warehouses and premises destined to the production of cigarettes and the storage of tobacco), zootechnical areas (farms, animal shelters, stables, kennels, and riding-schools), means of transport (undergrounds, buses, trucks, ship holds, railway carriages, means for the transport of people, animals or goods), composting plants, landfills, purifiers, sewers, and manholes; in open areas in order to obtain a fast reduction in annoying insects.

Controlled insects:

Flying insects: flies, common mosquitoes, and Asian tiger mosquitoes;

Crawling insects: cockroaches and ants;

Insects infesting foodstuffs and stored commodities.

INSTRUCTIONS FOR USE

The product must be used as is.

Spray on the affected surfaces and in all cracks, chinks and corners, behind furniture or equipment, wherever you notice the presence of insects. In case of treatments in green areas, we recommend a uniform wetting of the vegetation avoiding dripping. After use, let it dry.

SPEEDY-PY is perfect even for treatments of sensitive areas with hot- and cold sprayers: ULV, low-pressure pumps, backpack pumps, atomizers, and thermal smoke generators.

Mode of action:

SPEEDY-PY is a ready-for-use pyrethrum-based insecticide. Pyrethrum is a natural active substance with a very low toxicity towards human beings and hot-blood animals. The formulated product in water microemulsion allows for a high speed of action towards a high number of infesting animals and is characterised by a negligible toxicity towards non-target animals. **SPEEDY-PY** can be mixed with other compatible insecticides with residual action in order to increase its persistence.

Recommended doses

- Against mosquitoes (*including Asian tiger mosquitoes*), cockroaches (*Blattella germanica*) ants, insects infesting foodstuffs and stored commodities (*mealworm moth, bread beetle, and tobacco beetle*): 30 ml/1 m² of surface.
- Against flies for direct treatments on the insect: 80 ml/1 m² of surface.
- Treatments with thermal smoke generators: 1 litre / 1,500 m³.

**LABELLING**

HAZARD STATEMENTS: H411 Toxic to aquatic life with long lasting effects.
